This is the first course in the graduate macroeconomics sequence. It surveys the formal models that are invoked in the contemporary debates of macroeconomic policy; including classical, Keynesian, new classical and new Keynesian theories.

Macroeconomics as a field of study was motivated by an empirical fact, the Great Depression. Likewise, this course begins with a survey of the stylized facts of short-term, economy-wide instability. Nevertheless, much of the semester is devoted to the analysis of formal models at a theoretical level. Particular attention is given to the search, not for empirical explanation, but for coherence with microeconomics theory.

Wendy Carlin and David Soskice, **Macroeconomics: Imperfections, Institutions and Policies** has been ordered at the bookstore. Readings outside this text will also be assigned.

The grading scheme is:

- |   |     |
|---|-----|
| • homework assignments  | 20% |
| • midterm examination, October 3 <sup>rd</sup> 9:00-10:20           | 35% |
| • final examination, Tuesday, December 20 <sup>th</sup> , 1:00-3:00 | 45% |

The course objective is to prepare students to pass the *macroeconomics qualifying exam* next June.

Late papers lose points. The exam must be taken at the scheduled time. Incompletes are not generally given for nonmedical reasons.
