Course Content / Objectives

The evolution of modern economic ideas reflects the changing historical dynamics of capitalism and follows certain logics of intellectual development. Both the modern neoclassical economics and political economy find their intellectual origins in the classical political economy. Successive generations of economists have debated over the origins of value/surplus value, the underlying determinants of prices, and the inherent stability/instability of the capitalist system. Fundamentally, the debates raise the questions whether capitalism is an economically and socially rational system and whether there are historically viable alternatives to the existing economic system.

1. At the end of the course, students will be able to grasp the evolution of economic ideas from Smith, Ricardo, Malthus, to Marx, modern neoclassical economists, and Keynes, understanding their historical connections as well as the underlying logics of intellectual development.
2. There are two common themes throughout the course: the origin of value/surplus value (and the determination of relative prices); and the stability/rationality of the capitalist economic system.
3. Historical economic ideas will be related to contemporary economic theories and economic realities. This helps to enhance the students' theoretical understanding as well as their ability to analyze real world economic problems.
